1. EXECUTIVE SUMMARY

Savior Bottled Water tackles two urgent problems in Bangladesh: scarce affordable safe drinking water and severe plastic pollution. Using advanced multi-stage RO/UV purification, Savior sells certified-safe water at 14-16 BDT for 500ml, 20-30% below competitors Mum (20 BDT) and Kinley (20 BDT). The brand launches with 250ml, 500ml, and 1L bottles, expanding to 2L and 5L for households and businesses. Sustainability is built into operations through solar-powered production, 75-80% optimized RO recovery, and hybrid packaging: plant-based PLA for small bottles, durable reusable PET/HDPE for larger formats. Test phase (7,000 units/month) projects a monthly loss of 10,500 BDT due to 28,500 BDT fixed costs. Break-even at 14,000 units/month. Full-scale production (50,000 units/month) targets annual profits exceeding 2.64 million BDT by Year 3.

2. INTRODUCTION

2.1 Background

In Bangladesh, bottled water is not a luxury but a public health necessity. Widespread contamination has made most public water sources unsafe to drink. Groundwater accessed through tubewells contains dangerous levels of arsenic, putting an estimated 50 million people at risk of severe illnesses including skin disease, organ damage, and cancer. Additional contaminants such as manganese and boron further threaten public health, with children facing the greatest vulnerability. Because consuming this polluted water directly causes preventable disease, certified purified water has become an essential health commodity rather than an optional purchase.

2.2 The Environmental Crisis

Bangladesh generates 3.15–3.84 billion single-use plastic bottles annually. 78.6% are never recycled. Only 21.4% recycled nationwide; 37.2% in Dhaka. Major waterways including the Buriganga, Turag, and Shitalakshya Rivers are heavily polluted with plastic debris. Bottles persist 450 years, degrading into microplastics and releasing BPA. Only 18.4% of urban consumers recognize these environmental hazards.

3. PROBLEM STATEMENT

3.1. Problem 1: Unsafe Drinking Water

- A. 50 million people at risk from arsenic-contaminated groundwater
- B. 63% of Dhaka tap water tests positive for E. coli Arsenic
- C. Additional contaminants: manganese, boron, heavy metals
- D. Children face greatest vulnerability

3.2. Problem 2: Unaffordable Safe Water

- A. Premium brands (Kinley: 20-22 BDT, Mum: 18-20 BDT) price out the mass market
- B. Budget brands suffer perceived lower quality
- C. No brand combines certified purity with genuine affordability

3.3. Problem 3: Plastic Pollution

- A. 3.15–3.84 billion SUP bottles generated annually; 78.6% not recycled
- B. Bottles persist 450 years, degrading into microplastics
- C. Only 18.4% of urban consumers aware of environmental risks

- D. No major brand adopts measurable sustainable packaging

4. PROJECT GOALS

4.1. Primary Goals

- A. Provide certified, arsenic-free drinking water to price-sensitive consumers
- B. Capture market share with 20-30% lower prices than competitors
- C. Minimize plastic waste through plant-based packaging and reuse programs

4.2. Secondary Goals

- A. Reach break-even (14,000 units/month) within 6-9 months
- B. Establish Savior as trusted value-leader within 3 years
- C. Achieve 75–80% RO recovery and solar-powered production
- D. Create local employment in manufacturing and logistics

4.3. Long-Term Goals

- A. Introduce 2L and 5L formats for household and B2B markets
- B. Develop bottle buy-back program
- C. Expand from Dhaka to Narayanganj, Gazipur, and beyond
- D. Target annual profitability of 2.64 million BDT by Year 3

5. ABOUT SAVIOR

5.1. Brand Identity

- A. Name: Savior
- B. Tagline: "Save yourself, reimagine yourself"
- C. By: Vision Venture, Sonargaon University

5.2. Mission

Provide certified, safe drinking water at genuinely affordable prices while minimizing environmental impact.

5.3. Vision

Become Bangladesh's leading value-driven bottled water brand.

5.4. Core Values

- A. Purity Assurance: Multi-stage RO/UV filtration
- B. Affordability: Lean production, solar power, penetration pricing
- C. Eco-Responsibility: Sustainable packaging and operations

5.5. Unique Value Proposition

- A. Best Value for Money: 500ml at 14–16 BDT, 20–30% below competitors
- B. Unbeatable Purity: Certified, transparent testing protocols
- C. Eco-Friendly Empowerment: Conscious packaging, clear disposal instructions

5.6. Mitigation of Perceived Lower Quality

Budget brands like Fresh suffer quality perception issues. Savior counters this by marketing its multi-stage RO, carbon, and UV sterilization process, highlighting certification and CCPP optimization to prove low price results from operational efficiency, not compromised safety.

6. WHAT WE OFFER

6.1 Product Line

Phase 1: Initial Launch:

Bottle Size	Target Market	Cost (BDT)	Price (BDT)	Advantage
250 ml	Students, Street Vendors	7.00	8.50	Immediate Affordability
500 ml	Daily Consumption	9.80	14.00	Core Value Leader
1 Liter	Small Offices	13.00	17.00	High Utility

Phase 2: Expansion:

Bottle Size	Target Market	Cost (BDT)	Price (BDT)	Advantage
2 Liter	Households, B2B	21.00	26–27	Bulk Savings
5 Liter	Corporate B2B	40.00	55.00	Maximum Value

6.2 Taste and Quality

Multi-stage filtration removes TDS and contaminants. Post-RO re-mineralization introduces essential minerals for palatable, refreshing taste, avoiding the flatness of overly aggressive purification.

6.3 Purification Technology: Four Stages

- Pre-Treatment:** Depth filters remove particles > 5 microns, protecting downstream membranes and cutting maintenance costs by 35%.
- Activated Carbon:** Eliminates chlorine and organic compounds that ruin taste and damage membranes.
- Reverse Osmosis:** High-pressure pumps force water through semi-permeable membranes removing 99% of TDS, arsenic, heavy metals, viruses, and bacteria.
- UV Sterilization:** Final kill step achieving 99.99% pathogen removal before bottling.

6.4 Water Efficiency

Savior targets 75-80% RO recovery using CCPP (Calcium Carbonate Precipitation Potential) analysis to precisely measure scale formation, fine-tuning chemical treatments to protect equipment while maximizing output.

6.5 Sustainable Packaging

- 250ml/500ml: PLA (plant-based, compostable, non-GMO, no petroleum)
- 1L/2L/5L: Durable PET/HDPE (100% recyclable, designed for reuse/refill)

Bangladesh lacks industrial composting. Savior shifts emphasis from theoretical 'compostability' to demonstrable 'Durability and Active Reuse.' Packaging features clear multi-lingual instructions and QR codes for reuse, segregation, and a planned buy-back program.

7. TARGET MARKET

7.1 Primary Segment (B2C)

- Students: Daily affordable access via 250ml at 8.50 BDT
- Workers/Commuters: Core 500ml product at 14 BDT
- Low-to-Lower-Middle-Income Households: Seeking certified quality at better prices

D. Geographic focus: Dhaka, Narayanganj, Gazipur.

7.2 Secondary Segment (B2B/Bulk)

- A. Small offices and universities
- B. Large urban households
- C. Addressed by 2L and 5L formats

7.3 Market Demand

Bangladesh bottled water market projected at US\$1.8 billion with 3.14% CAGR (2024-2027). Growth driven by urbanization, rising incomes, and health awareness.

7.4 Competitor Analysis

Brand	Position	500ml Price (BDT)	Strength	Weakness
Kinley	Premium	20	Strong trust	High cost barrier
Mum	Mass Market	20	Wide distribution	Brand saturation
Fresh	Budget	18	Low price	Perceived low quality
SAVIOR	Value Leader	14	Value + Purity + Eco	New, needs awareness

Savior is 20–36% cheaper than Kinley, 11–22% cheaper than Mum. No competitor combines certified purity, affordability, and sustainability.

8. 4Ps of MARKETING

8.1. Product

- A. Multi-size portfolio (250ml to 5L)
- B. Certified multi-stage RO/UV purification
- C. Re-mineralization for superior taste
- D. Hybrid packaging: PLA (small), PET/HDPE (large)
- E. Clear disposal instructions and QR codes

8.2. Price

- A. Penetration pricing: 20-30% below market average
- B. 500ml at 14-16 BDT vs. competitors at 18-22 BDT
- C. Sustainable through lean production, solar power, 75-80% RO recovery
- D. Break-even at 14,000 units/month

8.3. Place (Distribution)

- A. Phase 1: Local shops, tea stalls, university campuses, small offices
- B. Phase 2: Online ordering and B2B delivery network
- C. Eco-friendly logistics: Electric vans and bicycles for last-mile delivery

8.4. Promotion

- A. Slogan: "Save yourself, reimagine yourself"
- B. Social media: Visual transparency of RO/UV process
- C. Influencers: Local environmental and public health advocates
- D. Loyalty programs: Refill discounts and return schemes

E. Community: Clean-up drives and water safety campaigns

9. SWOT ANALYSIS

Element	Positive	Negative
Internal	Strengths • Disruptive pricing (14–16 BDT) • Multi-stage RO/UV (99% removal) • 75–80% RO recovery • Solar-assisted production • Transparent sourcing • Lean distribution	Weaknesses • Low brand awareness • Limited starting capital • 7,000 unit test capacity • Dhaka-only initially • Water source dependence
External	Opportunities • 15–20% market growth • 63% E. coli in Dhaka water • Inflation driving value brands • 420% markup scandal distrust • Circular packaging demand • NGO partnerships	Threats • Retaliatory pricing by incumbents • 200+ competitors • Seasonal groundwater depletion • Bioplastic/PET price shocks • BDS-1414 regulatory changes • Supply chain disruptions

10. FINANCIAL PLAN

10.1. Test Phase (7,000 units/month)

Revenue: 88,000 BDT/month

Variable Profit: 18,000 BDT/month

Fixed Costs (28,500 BDT/month):

Cost Item	Amount (BDT)
Space Rent	10,000
Electricity/Water	3,500
Labor (1 helper)	8,000
Transportation	5,000
Total Fixed Costs	28,500

Net Monthly Profit: 18,000 – 28,500 = -10,500 BDT (Loss)

10.2. Break-Even and Year 1 Target

Metric	Test Phase (7,000)	Break-Even (~14,000)	Year 1 Target (~20,000)
Monthly Revenue	88,000	~150,000	~250,000
Variable Profit	18,000	28,500	~70,000
Fixed Costs	28,500	28,500	~30,000
Net Profit	-10,500	0	~40,000

10.3. Five-Year Profitability (Phase 2: Full Product Line)

Bottle Size	Monthly Units	Profit/Bottle (BDT)	Monthly Profit (BDT)	Annual Profit (BDT)
250 ml	10,000	1.50	15,000	180,000
500 ml	10,000	2.50	25,000	300,000
1 L	10,000	3.00	30,000	360,000
2 L	10,000	5.00	50,000	600,000
5 L	10,000	10.00	100,000	1,200,000
Total	50,000		220,000	2,640,000

10.4. Viability

- A. Aggressive pricing is sustainable through three operational pillars:
- B. High volume reducing fixed cost per unit
- C. Solar power stabilizing utility costs
- D. CCPP-optimized RO recovery saving raw materials

11. FUTURE IMPROVEMENTS

11.1. Product Expansion

- A. Year 2: Launch 2L and 5L formats
- B. Year 4–5: Flavored water, mineral-enhanced, sparkling options
- C. Smart packaging with QR traceability

11.2. Technology

- A. AI-driven quality control with predictive maintenance
- B. IoT-integrated smart bottles
- C. Next-gen membranes pushing RO recovery beyond 80%

11.3. Sustainability

- A. Brand-specific bottle buy-back program
- B. 90%+ water recovery and 100% renewable energy by Year 5
- C. Community water kiosks in underserved areas

11.4. Market Expansion

- A. Geographic: Dhaka to Chittagong, Sylhet, Khulna
- B. Digital: Proprietary delivery app with subscriptions
- C. B2B: Corporate contracts with schools, hospitals, government

11.5. Social Impact

- A. 50+ local jobs by Year 3
- B. NGO partnerships for nationwide water safety education
- C. Carbon neutrality through reforestation offsets

12. CONCLUSION

Savior Bottled Water capitalizes on severe market failures in public health and environmental stewardship. The brand bridges premium quality and mass-market affordability through multi-stage RO/UV purification, CCPP-optimized recovery, and lean solar-powered operations.

Penetration pricing is viable contingent on doubling initial capacity in Year 1 to absorb 28,500 BDT monthly fixed costs. The phased roadmap introducing high-margin 2L and 5L formats projects annual profits exceeding 2.6 million BDT at full scale.

Savior offers investors dual returns: robust financial growth in a rapidly expanding market, plus measurable social and environmental impact aligned with global ESG frameworks.

Investment capital is earmarked for high-efficiency production technology, solar power infrastructure, and foundational distribution network development. Join us to establish Savior as Bangladesh's market leader in affordable, safe, and sustainable bottled water, delivering Pure Water, Pure Value, and a Pure Choice.
