Introduction to the Problem

1. Clean and purified drinking water is a basic necessity; it should be accessible for each and every person.

2. Currently available brand's quality is unreliable for health, Driving new bottled water demand

3. Existing brands are too costly, which make not affordable for daily use

4. Plastic bottle waste increasing rapidly with urban heat and pollution

Why Purified Water Matters

**Trusting the
consistency of purity
with reliable source**

**Health concerns from variability in
municipal and local unsafe water supplies.**

**Certified purification processes are
necessary to ensure safety and
peace of mind.**

The Environmental Issue with Plastic Waste

***1. Single use plastic bottles
contributes plastic pollution
skyrocketing***

***2. Bangladesh facing high
landfill and ocean
contamination by low
recycling rates***

***3. Pricing model of industry
suppressing the
environmental cost which is
alarming***

Our solution overview

Advanced multi-stage standard filtration and purification with certificated system.

Truly Eco-friendly, with more sustainable and highly reusable bottles.

3. Significantly lower cost than Mum, Kinley, Pran and others known brands.

Product Description

- 1. Initially SAVIOR will be available in 250ml and 500ml and 1L, next we will be serving, 2L, and 5L variants.**
- 2. Produced in a certified facility using sustainably sourced water from local wells.**
- 3. Guaranteed superior taste, crisp, clean, and refreshing.**
- 4. Features reusable and environmentally safe packaging.**

Value Brand Strategy

Bottle Size	Approx. Cost (BDT)	Selling Price MRP (BDT)	Profit per Bottle (BDT)
250 ml	6.0	8	~2
500 ml	9.0	14	~4
1 Liter	13.0	19	~5
2 Liter	20.0	27	~7
5 Liter	48.0	60	~12

Purification Technology

- * **Multi-stage Reverse Osmosis RO Carbon Filter Systems for mineral blanch**
- * **Final-stage UV sterilization for complete pathogen removal**
- * **Optimized system engineering for reduced water wastage during filtering.**

Features of the Eco-Friendly Bottle

Made from biodegradable Plant-based plastic (PLA) designed for rapid degradation.

Lightweight Durable, high-density PET for maximum refilling and reusability.

Clearly marked instructions encourage proper disposal or long-term reuse.

Target Market

Primary Focus: Price-sensitive, high-volume and health-conscious consumers.

Students & Universities:
Need daily, affordable
access

Small/Mid-Size Offices:
High bulk consumption,
focused on cost savings.

Urban Households: Seeking
certified quality at a better
price point than premium
brands.

Market Demand & Opportunity

1. Bottled water market growth is consistently over 10% annually.

2. Increasing health awareness and on-the-go lifestyles drive demand.

3. Key Opportunity: A major gap exists for a premium-quality, economy-priced, eco-conscious product.

4. Affordable, green option highly demandable for urban areas

The 4Ps of Marketing Management

Product

What you sell

250ml/500ml/1L bottles,
RO+UV purification,
re-mineralized taste

Price

What customers pay

Pricing at 14–16
Pocket Friendly

Place (Distribution)

Where customers buy

Local shops,
universities,
online delivery,
eco-friendly logistics

Promotion

How you communicate

Social media transparency,
influencer partnerships,
community clean-ups

SWOT Analysis

STRENGTHS

Internal | Positive

- Disruptive value pricing (BDT 14 for 500ml)
- CCPP-driven 75%–80% RO recovery rate
- Hybrid solar-assisted grid reducing power bills

WEAKNESSES

Internal | Negative

- Low brand awareness vs. incumbents
- Low test-phase production capacity
- Conservative starting capital restricting marketing

OPPORTUNITIES

External | Positive

- Accelerating urbanization & population density
- High inflation driving consumers to value brands
- Emerging demand for circular plastic packaging

THREATS

External | Negative

- Retaliatory pricing campaigns by incumbents
- Seasonal groundwater depletion in aquifers
- Raw material price shocks in bioplastics & PET

Unique Value Proposition

1. We deliver the best value in the market.
2. No 420% markup, just clean water for every Dhaka family.
3. Clean hydration shouldn't cost more than your bus fare.
4. Every bottle tells you what's inside and what you paid for , no hidden profits, no mystery water.

Pricing Strategy

1. Lean production setup and minimal traditional marketing overhead.

2. Offering price lower than 20–30% from competitors' retail prices by following penetration pricing model

3. High volume sales, rapid adoption, and strong market penetration.

Competitor Comparison

Brand	Market Position	Weakness	Strength	Avg 500ml Price (BDT)
Kinley	Premium	Higher price	Strong trust	20
Mum	Mass Market	Brand saturation	Wide distribution	20
Fresh	Budget	Perceived lower quality	Low price	20
SAVIOR	Value	New brand awareness needed	Affordable, Clean Branding	14

Distribution Plan

**Partnerships
with local shops**

**Online ordering &
delivery app**

**Start local,
expand later**

**Eco-friendly delivery
(electric vans, bicycles)**

Marketing Strategy

**'Save yourself,
reimagine yourself'**

**Social media &
influencer promotion**

**Discounts & loyalty
points**

**Free bottle
exchange**
